

What are the benefits of GM Food?

Genetically Manipulated (modified) Food

'Genetic manipulation' does not mean 'Traditional Selective Breeding'

Scientists who divulge the dangers of GM foods are attacked or sacked.

Monsanto will not release their test results on GM Food. Why not?

Monsanto does not want GM Food clearly labelled. Why not?

In the end, GM means you have to pay royalties for what you eat to a corporation like Monsanto. Genetic engineering ends in the patenting of life, which includes: animals, plants, food and you; yes even you.

The evils of tobacco & asbestos were hidden from us for years. Now evidence shows that wherever GM food is eaten allergies are on the rise. The pollen from Genetically Manipulated Crops is now blowing in the wind. GM is our new **CANE TOAD** but this creeping toad is proving very dangerous for our children.

A few scientists in high places have sold out to their egos and big business – learn what they don't say about GM. Many scientists know the truth but remain silent for fear of offending their so-called colleagues or retribution by character assassination or being sacked. Scientists have already been sacked for warning of the dangers of GM food – just Google **GM potatoes and Dr Arpad Pusztai**.

In Canada, pregnant women and foetuses were found with *Bt* toxin in their blood. *Bt* toxin produced in the *Bt* cotton plant is more toxic than a commercial *Bt* spray. *Bt* (*Bacillus thuringiensis*) is grown in cotton in Australia. Google ***Bt* toxin in blood**. Many Fish & Chip shops use *Bt* cottonseed oil to cook with.

Genetic engineers are technicians and may do their job well, just as a plumber is a technician, but that plumber may still know nothing about the dam wall that is bursting in the hills just above the city. Ecologists know that GM crops are destroying the genetic bridges that should be protected intact for our children's future. There are also many scientists who do worry about the health issues from GM, especially in children and, the irreversible contamination of our gene pools by GM pollen. Sadly however there are a few genetic engineers in high places, who push GM, and they have one agenda, and that is to sell the Monsanto lie about the safety of GM transgenic food. Their aim is contaminate our world with patented DNA that is carried in the pollen then, by law, all crops belong to the likes of Monsanto.

Why do the media allow Monsanto's goons to peddle the claptrap that they intend to give us more vitamins and cheaper food through genetic engineering? Monsanto is a chemical company – would a chemical company design plants that need fewer chemicals – let's get real! Farmers in Canada and the US, now get lower yields and use more chemicals than ever before with GM. Many concerned scientists predicted all of this when this nonsense first started. In those so-called '**educational programs**' on GM they'll say "By 2050 earth's population will be 9 billion so we'll need to feed them". Those hearing that would be led to believe that GM means more food. Well, any person can prove that that is a lie pushed by Monsanto who has an international history of lying. Just Google **Monsanto convicted in France's Highest Court also Suicides in India thanks to Monsanto's GM cotton**. Europe is now banning GM so why are some of our gene technicians still in denial? A must see at www.gmo-free-regions.org

In 2009 US farmers planted a million acres of **Non-GM** soy. 12 years of GM has proven a costly failure; contamination is now common - **Cleveland Farm and Dairy USA** – farmers' story at www.DNAalert.net with lower yields and more chemicals you **can starve** the world but never **feed** the world with GM.

Farmers in the US have found that if animals are given a choice between GM and Non-GM food they will not touch the GM. You can read the farmers' reports at www.DNAalert.net

To learn how seriously many scientists view the issue of GM food and crops and the allergies due to GM food - just Google '**Scientists call for bans on GM for environmental and health reasons**'.

If Monsanto's pollen lands in your crop then legally you don't own your crop; the DNA is patented. **Mercenary Lawyers** are working for Monsanto, so farmers who refuse to pay royalties face a fine or prison. Those who talk '**choice**' talk nonsense. Google **Farmers court contamination Monsanto**.

The Australian Food & Grocery Council's CEO – Kate Carnell believes we must contaminate with GM for an economic advantage. What sort of nonsense is that Kate? Why not label **all** GM Food honestly? Labelled **CLEARLY IN LARGE PRINT** instead of that misleading microscopic farce à la *Monsanto's secrets*.

In 1995 Dr TJ Higgins of CSIRO began to develop GM peas. In 2006 he stopped. On feeding the GM peas to mice the mice developed an illness worse than asthma plus other allergies – so they boiled the peas; same problem. The control group of mice fed **Non-GM** peas were OK. Then it was found that only the mice that had eaten the **GM** peas developed allergies to foods that were **not** GM. So instead of following up to see why GM food was so dangerous, TJ Higgins stopped all GM food safety trials. Read the first three paragraphs on page 57 of 'Genetic Roulette' by Jeffrey Smith; yet, the silence is deafening.

GM food entered the world's diet some 15 years ago, there has since been a sharp rise in allergies including asthma and anaphylaxis most notably in children; ask any kindergarten or primary teacher. Some people are pushing the idea that we have been washing ourselves so much that we now have more allergies. Have we washed so madly since they introduced GM food? Children's food allergies are up since we have fed them GM food, not since we have used soap; very few people eat soap anyway.

Ask your doctor – are there any safe levels of allergens in food for children?
Remember what happened to the mice after they had eaten the GM peas at CSIRO.

Dr TJ Higgins at CSIRO now wants our children to eat GM food, just like his mice did.

Dr Jim Peacock, ex CSIRO froze out a scientist of 23 years for speaking the truth about GMOs.

Prof. Rick Roush of Melbourne University is a mate of Monsanto's; he'll talk GM nonsense to anybody.

After 1999 GM soy from the US began arriving in the UK, allergies to soy jumped from 10% to 50%. Massive protests over GM foods followed so supermarkets withdrew GM foods from sale and the rapid increase in anaphylaxis in children aged 0-14 stabilised. So why the silence in the media and from the handful of GM scientists about what happened to the mice at CSIRO or what happened to the rats that ate the GM potatoes produced by Arpad Pusztai in the UK. See what you are not told by the likes of **TJ Higgins, Rick Roush** or **Jim Peacock**. Just Google_ **Arpad Pusztai potatoes UK**.

Someone has now allowed the planting of GM wheat in Australia when they know that allergies increase wherever GM food is eaten. Because of: contamination, court costs, lower yields and more chemicals due to GM, Canadian and US farmers don't want GM wheat. So why are they planting genetically engineered wheat in Canberra and WA? By stealth they are moving GM wheat pollen around our country to contaminate our crops ASAP. So then, **our wheat will be under patent law for Monsanto**.

Learn more about GM from **concerned mothers** of Australia at _ www.madge.org.au
Why does a '**Monsanto rep**' work at CSIRO and why is the truth about GM withheld from the public?

We are fed unlabelled GM: **soy emulsifier, corn syrup, cottonseed oil**, and **canola oil** which go into many foods including margarine and that **so-called** vegetable oil. Since GM **corn syrup** went into sweets for the kids the rise in allergies are everywhere and do you remember what happened to the mice at CSIRO after they had eaten those GM peas? So why is all of this completely ignored by the President of the AMA? Surely the AMA's President is not in bed with Monsanto. Perhaps the current President of the AMA is frightened to speak up or just ignorant of the information that is sweeping the world about the sickness from GM and the disinformation that we are fed on this issue. Is there an elephant in the room?

Those who lack any social conscience are often called psychopaths. Do scientists and politicians who still push the GM lie have no social conscience? Just Google _ **corporate psychopath**.

Genetic Manipulation (GM) is a fast-failing food technology; those who look closely will see the truth. Those who care more about money than about our children are leading us down a GM path of no return?

GM means – contamination of our priceless gene pools, it also means patented DNA, corporate food control, and more sickness for our children but definitely no **extra** food. That **patented DNA** that is now carried in pollen is with us for eternity. **You** or any **High School Student** can easily verify this story.

Just watch carefully those who will scream at this information and then go into 'damage control' as they sell our children out to allergies and the control of our food by Monsanto, DuPont, Bayer and Syngenta. Watch the quislings perform with character assassination of anyone who challenges them. We've seen it all before - just as money lacks a social conscience sadly some 1% of people wearing suits do the same.
