CONTAMINATION HAS ALREADY BEGUN IN VICTORIA. BAYER OWNS THE PATENTED DNA.

## Genetically Engineered Food Crops

What you are not being told about Genetically Modified (GM) food

Any High School student can verify this simple information

Genetically engineered (GM) Crops are not about feeding the world. They're about controlling our food supply with patents and chemicals. In the US and Canada, farmers are taken to court because the farmer's crop gets contaminated by pollen owned by a chemical company. Unbelievable but true.

The real contamination of Australia with patented DNA has just begun. Canada is almost totally contaminated with GM pollen. Weeds are now resistant to Roundup and farmers must use stronger chemicals sold by Monsanto; of course. See National Farmers Union of Canada at: [www.nfu.ca](http://www.nfu.ca)

Learn about the **Terminator/Traitor** genes that these dangerous idiots want to release into our world. Note also, that we have **never** before been crossing plants with animals as has now already been done.

The control of our food by patented DNA is what this is all about. The DNA is carried in the pollen. When we are completely contaminated, nobody will control anything because it will be **out of control**. Canola '**test plots**' planted in Australia are **not** test plots; they are here to contaminate our country with **their** patented DNA which is carried in **our** pollen. **GM crops are the hideous new Cane Toads.**

Why contaminate Australia with pollen that is legally owned by a chemical company and destroy the \$billion markets for non-GM. Many countries have said **no** to GM but no country has **ever** said no to non-GM. So, why the rush to contaminate our clean crops with patented DNA? Bayer's patented DNA is now contaminating Australia. So who is liable and who should pay for the clean up?

**This concerns us all. Why do politicians remain silent? Ask them why!**

## GM Food is Sick. Pregnant Women Beware

Dr Irina Ermakova, from the Institute of Higher Nervous Activity and Neurophysiology of the Russian Academy of Sciences reported on October 10, 2005 that 55.6% of the offspring from female rats fed GM soy flour died within three weeks. The female rats were fed 5-7 grams of Roundup Ready (RR) soybeans, from two weeks before conception until nursing ended. In contrast, only 9% of the offspring of rats fed non-GM soy died.

Offspring from the GM-fed rats were also stunted, 36% weighed less than 20 grams after 2 weeks, compared to only 6.7% of the non-GM soy control group.

Remember that not all those who eat GM will react so badly. You could describe it as something like a game of Russian roulette; for our children.

See the truth about GMOs at [www.DNAalert.net](http://www.DNAalert.net)

**THEIR MOTHERS WERE FED  
NON GM FOOD      GM FOOD**

**Why should pregnant mothers be treated like rats?  
In the US, allergic reactions are on the increase.**
